

## **Collared Pratincole (*Glareola pratincola*).**

The first of four records was on Worth from Sep 12<sup>th</sup> to Oct 3<sup>rd</sup> 1976. In 1977 there was one in Pegwell and adjacent marshes on the exceptionally late dates of Nov 4<sup>th</sup> and 16<sup>th</sup> and an adult in Pegwell on May 25<sup>th</sup> 1987 was presumably the individual seen on Minster Marshes on the two previous days. Likewise, one in Pegwell on May 12<sup>th</sup> 1998 was presumably the same as at Grove Ferry from 11-13<sup>th</sup> and on Elmley RSPB on the 14<sup>th</sup>. An unidentified pratincole flew N at the Point on June 26<sup>th</sup> 1983.
